**Installation**

We will discuss with your IT personnel and review the necessary steps for the Phoenix cloud software installation and obtain a static IP, subnet, and gateway address from them for the new site controller. After the Phoenix Cloud login credentials are established for users, we will connect to the new FSC 3000 site controller and migrate the existing user file from the K800 site controller to the new FSC 3000. After the site controller is configured, remove and replace the K800 with new PV 200 FIT and test the system for proper operation. We will coordinate the system change over so there will be minimal down time at the fuel island.

If any additional time is necessary due to network issues or IT complications, it will be invoiced at our normal service labor and travel rates.
